

Quest® Development Studio

for SharePoint

Build More Business Value in Your SharePoint Environment

Microsoft SharePoint environments are expanding at an extraordinary rate within many organizations. And as more files are added to the SharePoint sites, IT teams and end users struggle to efficiently find and leverage the volume of information. SharePoint often serves as nothing more than a fancy file-share system, but it can add much more value if it's used to create shared applications that connect users to the information they need and reduce the "islands of information" that SharePoint inherently creates.

With collaboration features already built in to the SharePoint platform, its applications enable you to meet some critical business goals:

- Dramatically reduce the time spent looking for information by easily delivering content or providing an interface to it online
- Create consistent work processes via application templates to improve quality and simplify management
- Improve communication and accountability by providing visibility to work-in-progress reports and tracking

So how do you build these shared applications to make the most of SharePoint? Typically, a developer must write custom .NET code. But with Quest Software's Development Studio for SharePoint, creating shared applications is simply a drag-drop-configure operation.

Rapid SharePoint Application Development

You can fully leverage SharePoint's data management and presentation features via the Web parts provided in Development Studio. The tools make it simple for coders and non-coders alike to configure applications easily. The result is a 50 to 80 percent reduction in time and costs for application development.

Besides making application development a snap, the Web parts exploit the power in SharePoint to connect and manage list and library data within and across sites. This allows you to easily build shared applications with a consistent look and feel as well as rich functionality, data integrity and data security.

Development Studio also contains Web parts for:

- Customizing views and report presentations
- Entering multi-step data
- Making site and page navigation more intuitive
- Posting e-mail links and updates for team members

"Quest Development Studio is a powerful tool that allows non-developers to quickly build dynamic applications on the fly at a fraction of the normal cost. Any organization that is serious about taking advantage of SharePoint needs to consider Development Studio for SharePoint over custom development."

— John Ackery
Director
Devworkz

System Requirements:

- Microsoft Office SharePoint Server 2007 or Windows SharePoint Services 3.0 (to run SharePoint 2007 Web parts)
- SharePoint Portal Server 2003 or Windows SharePoint Services 2.0 (to run SharePoint 2003 Web parts)
- Recommend 2 GB RAM per processor

Build on a Long-Term, Strategic Platform

SharePoint is central to Microsoft's long-term strategy and Development Studio is an integral part of Quest's SharePoint strategy to provide a comprehensive set of tools for SharePoint.

So, build and secure your applications on a platform that will be available, fully supported and continually improved in the future.

Included Web Parts:

<i>Data Viewers</i>	<i>Data Entry</i>	<i>Data Selectors</i>	<i>Navigation</i>	<i>Display</i>
Quest List View	Quest List Form	Quest Selector	Quest Panel Menu	Quest Caption Display
Quest Calendar View*		Quest Multi-Selector	Quest Cascading Menu	Quest Help Link
Quest Chart View		Quest Item Display	Quest Bread Crumb*	Quest User Display*
Quest Excel Viewer			Quest Page Redirector*	

*Available for SharePoint Portal Server 2003 and Windows SharePoint Services 2.0 only.

About Quest Software, Inc.

Quest Software, Inc. delivers innovative products that help organizations get more performance and productivity from their applications, databases, Windows infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 50,000 customers worldwide meet higher expectations for enterprise IT. Quest's Windows Management solutions simplify, automate and secure Active Directory, Exchange, SharePoint and Windows, as well as integrate Unix, Linux and Java into the managed environment. Quest Software can be found in offices around the globe and at www.quest.com.
