Give Your Customers a Broadband Type of Experience at Dial-Up Prices

V.92 -- Your Competitive Edge

A broadband connection is ideal, but – as we've seen -- few consumers so far are willing to pay for it. But as you may know, there is now an alternative for dial-up consumers who want the advantages of broadband – such as speedy access, an uninterrupted connection and faster performance – without the high prices. That alternative is a V.92 modem.

Three attractive features make it similar to a broadband experience:

- **QuickConnect:** The modem handshake – the process of establishing an Internet connection takes half the time of a 56K modem.
Hear the difference at <http://www.v92.com/v92.htm> .
- **Modem-On-Hold:** Users can stay connected to the Internet while they accept or make phone calls; no second phone line is needed.
- **PCM Upstream and V.44:** Improved performance for downloads and uploads by as much as 60%.

V.92 modems are shipping now, so there's no question it's time to offer and support this new technology. The real question is...are you ready for more customers?

Find out how you can be listed for FREE as a V.92 provider on the official V.92 web site:
